

(REF:US07) ENTRY-LEVEL ANALYST

BOSTON, MASSACHUSETTS

Steer Davies Gleave is an employee-owned international transportation consulting firm. We advise clients in the public and private sectors on policy and regulatory issues, infrastructure investments, service design, and planning or business strategy. Our work frequently involves the development and application of state-of-the-art techniques in travel demand modeling and forecasting.

Steer Davies Gleave is seeking to fill an opening in its Boston office for an entry-level analyst. Candidates for this position should be highly motivated with a strong capability for critical thinking, a broad range of quantitative research and analysis skills, considerable proficiency using computers, and a particular interest in transportation.

A recent B.S. degree in engineering, economics or operations research would generally provide good preparation; other majors that involve quantitative methods may also be considered. Transportation-related work or research experience is a plus. Valuable skills include efficient, self-directed internet and library research and data gathering; data analysis (including basic statistics and econometrics); modeling (including network modeling and simulation); and clear, effective writing and communications.

Entry-level analysts at Steer Davies Gleave should be able to learn quickly; to apply their knowledge to solve problems involving new situations; to manage their time and prioritize tasks; and to communicate well with peers, senior staff and clients. They work closely with more senior personnel on small teams and are expected to perform challenging work and quickly assume increasing levels of responsibility.

Steer Davies Gleave is an equal opportunity employer.
